A, B, C, D, E and F are around at a circular	table facing towards the centre.
C is to the immediate left of E, and D is second	ond to the left of C.
A is third to the left of B.	
Only B is between F and E.	
Which of the following statements is FALSI	E?
Options:	
1. * D sits to the immediate left of A.	
2. F is the immediate neighbour of C and	D.
3. * B sits to the immediate left of F.	
4. * C is the immediate neighbour of A and	E.

Some sentences are missing from the text. Select from the list (A-C) the most appropriate sentence for each gap (1 and 2) in the text. There is one extra sentence that you do not need to use.
To illustrate how yoga can lead to one's attainment of God, Patanjali uses a beautiful analogy. He compares our mind to the surface of a pond. We do not see the divine in ourselves because our mind is constantly agitated, just as we cannot see the jewel at the bottom of the pond because the breeze disturbs its surface. (1) Also, one can see God within themselves if the mind is kept closed to the outside world. Scientists have only recently begun to acknowledge yoga's benefits. Experiments have now demonstrated that yoga practice can treat a variety of mental and physical ailments. Yoga practitioners do indeed acquire extraordinary powers, according to tests. For instance, they can survive for a very long time without food or oxygen. (2) Several centuries later, Patanjali's ideas are finally getting the attention they deserve.
A. Currently, laboratories all over the world are conducting research to investigate the benefits of yoga further.
B. The human body has channels and centres that Patanjali refers to as nadi and chakra, respectively.
C. The jewel at the bottom can be seen if the surface of the pond is unaffected.

Select from the list (A-D) the most appropriate sentence for each gap (1 and 2) in the text. There is one extra sentence that you do not need to use. We as a whole know the wonderful Cock. He has two red wattles, a long, curved tail that is multicoloured, and a red comb on it or skin fragments dangling from his chin. (1) _____. The Hen is not as beautifully marked as the Cock. She has a much shorter tail and smaller wattles and comb. These birds can be completely black or white, with red wattles and combs. However, the Cock is always superior to the Hen. The hen lays one egg each day for six or seven consecutive days in a nest made of soft grass or hay. She resumes laying after a break of one or two days. The eggs may be brown, speckled, or plain white. The hen will continue to lay until there are approximately ten to twelve eggs in the nest if the eggs are not removed. After that, she will sit on them until a clutch of eggs hatch. Grain, seeds, and insects are what the Hen and Cock consume. (2) _____. A. He crows frequently at dawn every day. B. Both the birds' own eggs and the birds themselves can be used to make delicious food. C. One of the most common domestic animals is the chicken. D. They use their razor-sharp claws to scratch the ground to eat and also feed their young. **Options:** 1 * AC 2. * BD 3. **«** AD 4. * BC

Question Number: 70 Question Id: 630680183895 Is Question Mandatory: No Calculator:

None Response Time: N.A Think Time: N.A Minimum Instruction Time: 0

Correct Marks: 1 Wrong Marks: 0.25

Study the given inference that is followed by some paragraphs. You have to find the paragraph(s) from which it is inferred and select the most appropriate option.

Inference: Multinational corporate system

- 1. The degree to which people are willing to tolerate the unevenness that the multinational corporate system generates is crucial to its viability. It is important to keep in mind that Capitalism's new imperialism began after 1870. After 1914, the triumphant era was marked by war, depression, the collapse of the international economic system, and yet another war rather than Free Trade, Pax Britannica, and Material Improvement. Britain's inability to deal with the by-product of its own rapid capital accumulation—a class-conscious labour force domestically, a middle class in the hinterland, and rival capital centres on the continent and in the United States—was a major factor.
- 2. Instead of being progressive, Britain's policy tended to be aggressive and defensive, more concerned with preventing new threats than with expanding into new areas. Ironically, the landed aristocracy's belongings were revived in Edwardian England. Colonial administrators frequently implemented policies to stifle the growth of either a native proletariat or a native capitalist class, both of which had the potential to overthrow the Empire. The centre had to rely on alliances with an ineffective class of landlords, officials, and soldiers in the hinterland to maintain stability at the expense of development as time went on. As a result, the centre had to devote an increasing portion of government activity to the military and other wasteful expenditures. As a result, a significant portion of the population's surplus was invested locally.

 3. India's corporate sector was established to break free of these restrictions and open up a variety of economic sectors. Although export-import policy, technology advancement, fiscal policy, and foreign investment liberalization proposals were prefaced in the 1980s, industrial licensing and economic reform policies launched in 1991 were more general. The financial sector, the industrial sector, the foreign exchange markets, tax reforms, the investment and trade sectors, and the industrial sector all gained recognition after 1991.

Inference: Greece and advanced knowledge

1. In fact, the Greeks were also very good at math and astronomy. Thales investigated the way the stars moved and discovered that, contrary to popular belief, they moved in accordance with established natural laws. Pythagoras discovered the earth's movement, and Anaxagoras discovered the true cause of eclipses. Meton, another astronomer, made significant improvements to the calendar, and Hippocrates made significant contributions to the study of medicine.

- 2. In his fifth-century work History, Herodotus—known as the "father of history" —described the wars that took place between Greece and Persia in great detail. The first history book in the world was this one. Even in the early days of recorded history, he recognised the significance of the written word.
- 3. Many Greek cities developed into centres of research, study, and experimentation. The fifth century BC saw, Under the leadership of its great statesman, Pericles, Athens developed into a major centre for art and education. He welcomed not only architects, sculptors, and artists, but also historians, scientists, poets, speakers, and educators to the city. During this time, the Athenians produced some of the best plays, sculpture, and architecture. Naturally, being able to read and write was of the utmost importance in Greece. Boys began attending large schools when they were seven years old. Typically, girls studied at home.

For a quarter of a century, those men had followed Gandhi. They had thrown off their western suits for his khadi, moved their fingers to the unfamiliar rhythms of the spinning-wheel. In his name, they had marched into the flailing lathis of the police and the gates of British jails. Quelling

occasional doubts, they had followed him on his improbable crusades to the improbable triumph

now beckoning: independence wrested from the British by Gandhian non-violence.

They had followed him for many reasons, but above all, because they saw that his unique genius for communicating with the soul of India could draw mass support to their banner. The potential differences between them had been submerged in the common struggle with the British. Now, in that hot Delhi night, those differences began to emerge as they debated Gandhi's plan to make Jinnah Prime Minister. If they refused to endorse his scheme, Gandhi argued, the new Viceroy might find himself driven into a corner from which the only escape would be partition. Walking from village to village in Noakhali and later Bihar, applying his 'ointment' to India's sore spots, Gandhi had understood infinitely better than those political leaders in Delhi the tragedy partition might produce. He had seen in the huts and swamps of Noakhali what havoc communal fury, once unleashed, could wreak. Partition, he argued, risked unleashing those passions, not dampening them. Desperately, he begged his followers to accept his idea as perhaps their last chance to keep India united and to prevent that tragedy. He could not budge Nehru and Patel. There was a limit to the price they were prepared to pay to keep India united and handing over power to their foe, Jinnah, transgressed it. They did not share Gandhi's conviction that partition would inevitably lead to terrible violence. Broken-hearted, Gandhi would have to report to the Viceroy that he had not been able to carry his colleagues with him. The real break was still some distance ahead, but Gandhi and those men he'd so patiently groomed were fast approaching a parting of the ways. The culmination of Gandhi's crusade was now drawing near, and it would end as it had begun, in the stillness of his soul.
